PROJECT-CAM

PROJECT-CAM is a fully integrated remote video system that allows real-time viewing of your facility from any location in the world. Time and date stamped images are recorded at regular intervals then archived on Site-Cam's servers for future viewing. Real-time video and archived images can be accessed 24 hours a day from any Internet-enabled machine with a web browser.

Project-Cam is a 100% turnkey solution which includes:

- **Equipment:** Reliable, high quality, weather resistant video cameras capable of withstanding any environmental conditions. Also includes all necessary hardware required for high-speed Internet access.
- **Installation & Support:** Site-Cam's staff provides full on-site installation & testing of all video equipment. We also provide high-speed Internet access to the job site, as well as all necessary Internet connectivity hardware. In addition, we customize a website that is fully dedicated to your Project-Cam solution. Site-Cam provides complete technical support services for all of our customers using our solutions. This includes telephone and on-site support for all video and Internet hardware, as well as changes or problems with the Project-Cam website.
- **High-Speed Internet Connection:** Site-Cam provides all necessary resources for fast and reliable Internet connectivity (i.e., T-1, DSL, Frame Relay, etc.).

PROJECT-CAM BENEFITS

Lower Project Costs: Project-Cam can cut down on the amount of site visits typically involved with construction projects, thus dramatically reducing travel costs. Project-Cam can also help eliminate or reduce the need for sending photos and documentation of the project's progress to customers, stakeholders, subcontractors, and the media. Payment issues regarding scheduling and completion dates can also be resolved quicker. Archived Image Server provides access to all previously recorded pictures which display time and date stamps.

Improve Project Management: Remote video and current images provide real-time status. Subcontractors can meet just-in-time schedules by viewing the current images to get an immediate update on the project. The archived and panoramic images enable accurate tracking of the projects progress. The panoramic images also provide a weekly view of the entire project. General contractors can review the archived images to determine actual completion dates of the subcontractors tasks.

Reduce Litigation: Project-Cam can help dramatically reduce loss-time-accidents, workers compensation, and personal injury costs. The time stamped images provide visual evidence of the events that take place during the project. Personal injury litigation can be one of the largest expenses to an organization. Project-Cam helps reduce or eliminate potential disputes regarding contractor negligence. In the event of personal injury or property damage during a project, the archived images can visually capture the circumstances as they occur.

Improve Public Relations: The public can access the Project-Cam web site images and review the project's progress 24 hours a day. The panoramic images provide a visual summary of a project's weekly progress. Providing a high level schedule on the "Project-Info" page will give the public a chance to see what items still need to be done in order to complete the job. The web site also keeps the public or stakeholders informed and confirms that their money is being spent wisely. Proper expectations about completion dates can be set more accurately by keeping the public informed.

Improve Project Safety: Project-Cam can improve project safety by capturing archived images to review for compliance to safety standards and procedures. Project-Cam can also allow you to monitor the workers' activities in real-time, helping you ensure that safety policies and procedures are being adhered to. Project-Cam can also help you protect personnel or property from harm.

VIDEO AND IMAGE SERVICES

- **Real-time Video:** Project-Cam gives you live, clear, high quality video transmitted directly to any web-enabled PC. This provides up to the minute monitoring of your construction site 24 hours a day.
- **Archived Images:** Site-Cam records time and date stamped images of your construction site at regular intervals, then stores them on our own servers. A series of archived images can be time-lapsed and run together continuously, painting a picture of the job site's progress over a given period of time. These images can be accessed 24 hours a day from any web-enabled computer.
- **Panoramic Images:** Provides an unbroken view of the entire construction site. Several preset camera positions are combined together to present a continuous scene of the entire job site. Panoramic images are updated on a weekly basis.
- **Project Info:** This is a customized web page that lists various information about current project including: project description, location, start date/projected completion date, names of all subcontractors, high level schedules, task completion list and project milestones.
